Education

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES

Bachelor of Science in Computer Science

Senior High School - Science, Technology, Engineering, and Mathematics (STEM) Strand

Graduated with Highest Honors

Sta. Mesa, Manila

2024-Present

2022-2024

Experience

PUP Association of Students for Computer Intelligence Integration

Vice President for Research and Extensions

Manila

August 2026 - Present

- Lead the Research and Extensions Committee, overseeing member recruitment, onboarding, task delegation, and project coordination.
- Handled partnerships, securing strategic collaborations and sponsorships with tech companies, industry sponsors, and external student organizations.

PUP College of Computer and Information Sciences

Immersionist

Sta. Mesa, Manila

February 2024 – May 2024

- Digitized and organized departmental records, maintaining secure filing systems and routing critical documents across university offices in accordance with institutional records-management procedures.

Technical Skills

Programming: C, Java, Python, TypeScript, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Flutter

Databases & Deployment: PostgreSQL, Supabase, Vercel

Tools: Git, GitHub, Docker Compose, Android Studio, VS Code, Antigravity

Selected Projects

EcoEcho: Social Environment Application | Flutter • Node.js • PostgreSQL • Vercel

June 2026

- Engineered a full-stack gamified environmental application using Flutter for the cross-platform frontend and Node.js for the backend API.
- Architected frontend state management using the BLoC pattern across authentication, mission boards, and dynamic dashboards.
- Co-designed the relational database schema to support user accounts, environmental missions, achievements, and leaderboard data.

PUP ASCII Website | Typescript • React • Node.js

May 2026

- Developed the frontend architecture for the official PUP-ASCII website using TypeScript.
- Implemented the About page with responsive layouts and reusable components.

Matrix Cofactor Calculator | Typescript • React

February 2026

- Led the development of a web-based linear algebra calculator using React and TypeScript to recursively compute determinants via cofactor expansion for up to 10×10 matrices.
- Engineered interactive features for step-by-step solution visualization, LaTeX formatting export, and automated PDF generation.

Split: Bill-Splitting Utility | JavaScript • React • Vercel

- Developed a single-page expense-splitting web utility using React to automate group balance calculations, in isolated charges, and individual discount deductions.

EMMA: Emergency Monitoring System | Flutter • Dart • SpringBoot • PostgreSQL

February 2026

- Conceptualized EMMA, a full-stack emergency monitoring platform.
- Led the writing of technical documentation, covering system requirements and functionality.
- Conducted end-to-end system and quality-assurance testing to identify, document, and resolve functional issues.
